

Frequently Asked Questions

What is a phytonutrient and why are there so many in DOUBLE X™?

Phytonutrients are naturally occurring chemicals in plants that help fight off insects, resist disease, promote healthy growth, and enhance survival. NUTRILITE™ has always included these plant nutrients in its supplement formulas because of their health benefits to humans. The phytonutrients found in the 23 plant concentrates in DOUBLE X™ offer you both broad and targeted antioxidant protection.

Why do I need a supplement?

Medical science has established a link between vitamins and the reduced risk of chronic diseases. All adults should take a multivitamin, daily. This is true even if you already eat a diet rich in fresh, whole, natural foods, because foods can't supply all the vitamins and minerals you need, at the recommended levels. If you're going to supplement, why not start with DOUBLE X™, the world's best multivitamin?

Why are antioxidants important?

Antioxidants are your natural defences against free radicals. Free radicals oxidise compounds in your cells – even in your DNA – starting a chain reaction of instability and damage. The antioxidants in DOUBLE X™ neutralise free radicals in five categories and offer protection – right down to your cells!

Why should I choose DOUBLE X™ over any other multivitamin/multimineral?

Because it's the best one, made by the company that marketed the very first multivitamin/multimineral in North America. NUTRILITE™ is the world's leading brand of vitamins, minerals, and dietary supplements, in tablet/capsule form, based on 2005 sales*. You get the reassurance of Nutrilite's cutting-edge research; plant concentrates from natural sources, grown to the highest standards; and the nutritional insurance offered by a great multivitamin.

*based on a survey of global vitamin and dietary supplement brands conducted by Euromonitor International.
